**ABSTRACT:** This paper gives the information and recommended online payment method and comparison with outstanding Online Payment Systems. A payment gateway is an electronic-commerce application service provider provision that authorizes credit card payments for electronic businesses, online retailers, bricks and click/s. PayPal is the preferred method of payment for almost a quarter of all online shoppers. PayPal has a reputation for security, protecting the interests of both merchants and consumers. It is also a convenient option for consumers and merchants. Consumers spend less time entering their information; merchants can set up a payment system quickly, with no upfront payment required.

**Key Words:** E-Commerce, SET, Online Payment Systems, Stripe, Recommended online Payment Method-PayPal

## I.INTRODUCTION

E-commerce refers to businesses and consumers buying and selling products online. The preponderance of e-commerce websites on the internet are retail stores selling products directly to the public. While buying products online, it is very important that you select the right payment method for yourself. Before you buy an item, always make sure that the seller's payment methods will work for you. Online Payment Methods, Online Bank Transfer, Credit Card, Debit Card, Cash Card, Mobile Payment). A payment gateway is what enables the credit card transactions to take place. It's a layer of processing that interface with your ecommerce site and your merchant-account. This is wherever security, encryption and all that important stuff come into play.

This study proposing PayPal is the best and recommended online payment method. PayPal has a reputation for security, protecting the interests of both merchants and customers. It is also a convenient option for patrons and merchants. Consumers spend less time entering their information; merchants can set up a payment system quickly, with no upfront payment necessary.

An e-commerce payment system facilitates the acceptance of electronic payment for online transactions. Also known as a sample of Electronic Data Interchange (EDI), e-commerce systems have become gradually more popular due to the widespread use of the internet-based shopping and banking. PayPal is a global e-commerce business allowing payments and money transfers to be made through the Internet. Online money transfers serve as electronic alternatives to paying with traditional paper methods, such as checks and money orders. It is subject to the US economic sanction list and other rules and interventions required by US laws or government. PayPal is an acquirer, performing payment processing for online vendors, auction sites, and other commercial users, for which it charges a fee. It may also charge a fee for receiving money, proportional to the amount received. The fees depend on the money used, the payment option used, the country of the sender, the country of the receiver, the amount sent and the recipient account type.

## II.AIM OF THE STUDY

- ✓ To know the concept of E-commerce
- ✓ To understand Security Electronic Transaction
- ✓ Knowledge on kinds of Online Payment Systems
- ✓ Comparing PayPal versus stripe, Google checkouts and Amazon payments
- ✓ Recommending best payment method - PayPal with pros and cons

## III.RELATED WORK

This paper firstly analyze the boundaries of the conventional model of the 3<sup>rd</sup> payment, then puts forward a kind of online payment model of the third-party payment based on the two-way management method; it stresses integration of the logistics, information flow, fund flow, business flow and government

affairs flow in E-commerce to reduce the online payment risks of the customers, and it emphasizes the structure and the security measures of the collaborative management model of the online third-party payment.

The construction of the online payment market has been the hot spot of the development of electronic-commerce, and how to improve the electronic payment market to solve the bottleneck of e-commerce payment is the focal point. This paper uses the standardize methods to analyze the problems in the development of the third-party payment and holds that much importance should be attached to risks in the development of third-party payment, and take some procedures such as increase supervision, improve the legal system and business and services novelty to promote the growth of third-party payment in our country.

In the context of the growth of e-commerce on the Internet, a lot of electronic payment systems have been set up in order to secure online payments. To understand the success of Internet payment system it is essential to analyze the strategies of e-commerce actors customers, "cyber merchants", managers of networks (telecommunications and payment), suppliers of electronic payment services and banks. Our results provide objective explanations of the success factors of Internet payment systems, and the domination of SSL card payment in the market. Only PayPal could, in the middle term, compete with the SSL card payment. Moreover, failed experiences show that it is necessary to consider network effects and which business models to implement in order to avoid killing a new Internet payment system before it is launch.

Through third-party brokers paid model its characteristic is as follows Bank card information is not open to the broadcast network, is paid by users. Both businessmen trusted third party (agents) to complete (in Fig. 2.)

Fig 2 Using Third party brokers Model

Fig 4 SET Model

SET (Security Electronic Transaction) model "Secure Electronic Transactions," and referred to the SET. In an open Internet is an understanding of the global agreements and standards for secure electronic transactions. Their characteristics are as follows SET transactions participants to provide certification to ensure data security, integrity and non-repudiation of transactions, in particular to ensure that no information leaked to the cardholder's account for the businesses. Guarantee the safety of the SET. Such a system more suited to the B to C mode of transaction (See Fig.4).

#### IV. PAYMENT METHODS

Making purchases through the Internet is a fact today and is successful. And one of the best gears that the Web offers today is the capability to take your business wherever on the planet through a website. This is why it became essential to purchase via the Internet through many payment service provider. Payment Service Provider, is a company that provides online marketing services, it accepts payments electronically by managing transactions between seller and buyer. The most common payment methods that are usually offered are by credit card, bank transfer and real time orders. In addition, PSP offer full guarantee against any risks, especially with global transactions, and thus gain the confidence of consumers who use them. All online payment systems are assigned a tax rate on transactions, fixed or variable.

**Top 10 outstanding Online Payment Systems**

**1. Authorize.Net**

Authorize.Net is the Internet’s most broadly used payment gateway. With a user base of over 300,000 merchants, Authorize.Net has been the go-to method for e-commerce sites that need a gateway to accepting payments. Widely used e-commerce platforms such as Magento, Volusion and X-Cart are designed to accept payments using Authorize.Net easier.

**Pricing:** Authorize.Net has a \$99 setup fee, costs \$20 per month and takes a \$0.10 per-transaction fee.

**Source:** Authorize.Net pricing.

**2. PayPal**

PayPal is the world's most broadly used payment acquirer, processing over \$4 billion in payments in 2011. PayPal payments are made using a user's existing account or with a credit card. Money can be sent directly to an email address, thus prompting the users to sign up for a new PayPal account. In addition to taking payments, PayPal also allow its users to send money through the service, which is a characteristic that only a few payment solutions provide.

**Pricing:** PayPal takes 2.9% + \$0.30 per transaction and has no setup or monthly fees.

**Source:** PayPal merchant fees.

### 3. Google Checkout

Google Checkout is Google's answer to PayPal. Google Checkout allows users to pay for goods and services through an account linked to their Google profile. The major benefit that Google Checkout has over the competition is that millions of Internet users use Google for other services, making a purchase through Checkout a simpler process.

**Pricing:** Google Checkout fees start at 2.9% + \$0.30 per transaction for sales less than \$3,000. The percentage they take goes down depending on monthly sales volume.

**Source:** Google Checkout fees

### 4. Amazon Payments

Amazon Payments allows its users to receive money using its API (and to send money out via ACH). Popular crowdfunding site Kickstarter uses Amazon Payments.

**Pricing:** Amazon Payments fees start at 2.9% + \$0.30 per business for payments over \$10 (the percentage they take is less for larger transactions). For payments under \$10, the fee is 5.0% + \$0.05 per transaction.

**Source:** Amazon Payments fees

### 5. Dwolla

Dwolla is a direct competitor to PayPal. One of the newcomers in the third-party payments space, the company is processing over \$1 million per day. Setting up Dwolla payments is similar to PayPal, although Dwolla doesn't have the same name detection as their competition.

**Pricing:** There are no fees for transactions less than \$10. For transactions over \$10, Dwolla charges \$0.25 per transaction.

**Source:** Dwolla fees.

### 6. Stripe

Stripe provides a good payment solution for web developers who would like to integrate a payment system into their projects using Stripe's robust API. By bypassing the traditional sign up process, Stripe acts as a commercial account for its providers, handling all PCI compliance and merchant approvals.

**Pricing:** Stripe charges 2.9% + \$0.30 per transaction with no setup or monthly fees.

**Source:** Stripe pricing.

### 7. Braintree

Braintree is an online payment gateway and commercial account solution known for working with popular tech start-ups such as Airbnb and LivingSocial.

**Pricing:** There is no set-up or monthly fees. Transaction fees are 2.9% + \$0.30 per transaction for qualified cards.

**Source:** Pricing - Braintree

## 8. Samurai

Samurai is a payment gateway and merchant account solution. The company's main product, FeeFighters, is a tool to help merchants evaluate rates for merchant accounts. Samurai was developed as a direct competitor to Braintree and other gateway/merchant solutions and offers customers a payment gateway or a gateway/merchant account package.

**Pricing:** For their gateway/merchant solution, Samurai takes 2.3% of all sales volume, costs \$25 per month and charges a \$0.30 fee per transaction.

**Source:** Samurai by FeeFighters pricing.

## 9. WePay

WePay is a payment processor that allows Internet merchants to accept credit cards and bank account payments online. WePay seems to be focused on the individual user, and has recently added e-store pages to their service to help their clientele conveniently take in payments (e.g. event tickets, goods, donations and so onward) through their service.

**Pricing:** WePay charges a 3.5% transaction fee (with a \$0.50 minimum) for credit card transactions and \$0.50 for bank payments, with no setup or monthly costs.

**Source:** WePay fees.

## 10.2Checkout

2Checkout is one of the another payment processor that combine a merchant account and payment gateway into one, allowing clientele to receive credit card payments as well as PayPal payments. The company offers global payments, shopping cart stores as well as a recurring billing feature.

**Pricing:** 3.99% (if you apply by May 1, 2012), a \$0.45 transaction fee and \$10.99 monthly service fee. Pricing and fees – 2Checkout

## V.RECOMMENDED PAYMENT METHOD - PAYPAL

### Advantages to Using PayPal

#### 1. Credit Card Security

When you sign up for a PayPal account, you type in the credit cards and bank accounts you wish to use for purchases one time on the PayPal secure system. Once that is accomplished, you never again have to reveal your credit card information online. By paying with PayPal, you keep your credit card information confidential, meaning that you can shop without worrying about a hacker downloading your account data from your online merchant.

#### 2. Flexibility

Relieve yourself of the awkwardness and irritate of annoying to purchase goods and services online only to have your credit card decline. Because you can set up many bank accounts, debit cards, and credit cards to fund your PayPal account, you can rest assured that your PayPal purchases always go through the first time. PayPal will then look for money from your source based on the order you describe.

#### 3. Send Money

Whether you need to transfer money to a child at college or a friend in problem across the globe, PayPal users can immediately transfer money to them with just a click of the mouse. Save time and money over expensive Western Union style transfers while getting money to where you wish to send it sooner than ever.

#### 4. The iPhone App

The PayPal iPhone application makes it easy to shop online and transfer money wherever you are. All you have to do is visit the Apple iTunes store and hunt for the PayPal app and you will be ready to transfer, send money, pay bills, review your transaction history, and make purchases right from the palm of your hand. Because PayPal will ask you to confirm transactions with a PIN, you can rest guaranteed that your finances are secure should your iPhone be lost or stolen. If you meet somebody you need to pay while out on the town, just bump iPhones and make your transfer.

#### 5. Online Auctions

How could anyone talk about PayPal without mention eBay? Because PayPal is integrated with the online auction powerhouse, you can place bids and make purchases safely. Buyer safety and a planned complaint resolution process means that eBay bidders have more safety than most credit card holders when it comes to one of the most popular online shopping sites.

#### 6. Cost

One of the best reasons for using PayPal is its cost free. That's right. No annual membership fees,

no processing fees, no service charges. Shoppers using PayPal get all the powerful advantages connected with the service and do not have to pay one.

**7. Discounts**

PayPal sponsors special discounts for customers that shop with PayPal at selected retailers. Users who visit paypal-shopping.com can find the latest special offers from company like HP, Barnes & Noble, Wal-Mart, Nike, and many more. The bottom line is that PayPal can save you money on the things you need at the places where you shop. To take benefit of the savings all you have to do is copy the special promo code from the PayPal shopping Web page and paste it into your order at your merchant's site when you pay with PayPal.

**The PayPal offers**

PayPal is guaranteed against fraud, saving time, Sending Money abroad, Dispute resolution center, saving money

**The Disadvantages**

PayPal can immediately freeze your account and hold your money. This is a private company and not ruled by any federal banking regulations, there for have no need for your authorization or approval for freezing your account. if they feel that you have stanch a fraud or violated they're policy your they might freeze your account and hold your funds till further notice . When your account is frozen it might take a while till PayPal decides to release your funds and might leave you with very limited options and without proper explanation.

**PayPal Versus stripe**

Let's compare Stripe and PayPal's service fees:

Service	PayPal	Stripe
Charge cards from your website	\$30 / month [1]	Free
Chargeback	\$20	\$15
American Express	3.5% [2]	Same flat rate
Refund	Transaction fee	Free
International cards	1% [3]	Free [4]
Authorize card	30¢ [5]	Free

US transaction fees Stripe - 2.5 + .30 per transaction  
 Paypal - 2.2 + .30 per transaction

Paypal

- ✓ Re-direct users to PayPal's website, away from yours
- ✓ Users enter credit card details or log into Paypal account
- ✓ User confirms they want to allow company to bill them
- ✓ User is redirected to company site
- ✓ User gets what they paid for

Stripe

- ✓ User enters credit card details or logs into company site
- ✓ User gets what they paid for

**Functions of PayPal**

1) First of all Register Yourself

- ✓ To be able to use PayPal, you need to have a valid email ID and a credit card or bank account (for ease of writing, I am going to say just “bank account” from now on).
  - ✓ You would register with PayPal using your email address as your user ID. You’ll be identified with your email address.
  - ✓ After registration is done, you’ll need enter your bank or credit card details in your profile.
- 2) Verify your Bank Account
- ✓ To verify that you have entered the correct bank account details, PayPal will transfer one or two very small amounts of money into your account. Once you receive these amounts in your bank account -you would need to go back to your PayPal profile and enter the amounts you’ve received.  
Ex: if you’ve received \$0.1 and \$0.25 from PayPal -you would need to enter these numbers.
  - ✓ If you enter correct values, your bank/credit card account would be considered verified. Your PayPal account is now ready and you can send/receive monies through it.
- 3) Receive Payment through PayPal
- ✓ When you need to receive payment from someone -just tell that person your email ID which is registered with PayPal. It does not matter where the payer is located. All you need to tell her is your registered email ID.
  - ✓ When your payer has transferred money to your PayPal account -you will get an email informing that you have received this much amount from so-and-so person.
  - ✓ Now, either you can keep your money in your PayPal account or you can transfer it in your bank/credit card account. However, some countries, like India, do not allow you to keep money in your PayPal account. So, money will automatically be transferred to your bank/credit account soon after the payer makes payment.
  - ✓ Before transferring money to your bank/credit card account, PayPal will cut its commission (transaction fee). At present PayPal takes 3.4% of total transaction money. So, for each dollar, you’ll get only 96.6 cents in your bank account.
- 4) Make Payment via PayPal
- ✓ You can use your PayPal account to send money as well. You can transfer money to anyone who has a verified PayPal account.
  - ✓ Just ask for the PayPal email ID of the person whom you want to pay.
  - ✓ Then go to your PayPal account and send the required amount to that email ID. PayPal will withdraw that amount from your bank account (or charge it to your credit card).
  - ✓ Then PayPal will cut its fee and transfer rest of the money to the payee. Payer and payee should negotiate in advance as to who will pay the transaction fee of PayPal. If payee is supposed to pay this fee then for a payment of \$100 you can send \$100 (and the payee will get \$96.6). But if you’re supposed to pay the fee then you should transfer the payment amount + PayPal fee.

**VI. CONCLUSIONS**

Paypal is only one of the world’s most widely used payment acquirers processing some 8 million payments every day. As of this writing, PayPal has over 137 million active accounts in 193 markets and 26 currencies around the world, which makes it easy to transfer and request payments. Other PayPal perks include accepting checks through a Smartphone’s camera, a card swapper, and allowing customers to make a purchase without leaving your site. There are many advantages of using PayPal for both, the seller and the customer. Advantages are Ease of setup, Brand name and recognition, Pricing policy, Huge potential customer base, Ease of execution, Multiple account options, Ability to accept international payments and cards, observance track of transactions, Integrating payments with eBay.

PayPal is now also an all-in-one online payment solution. Their Website Payments regular program lets you accept Visa, MasterCard, Discover, and American Express credit card payments as well as bank transfer and offer PayPal as well – with no monthly cost, setup or termination fees. PayPal charges you a fee of 1.9 to 2.9 percent of transaction plus 30 cents per order, depending on your company’s sales volume. So this study recommending Paypal is the best payment method comparing to other online payment method.
